

NCI UltraPrint Everest Printable Media

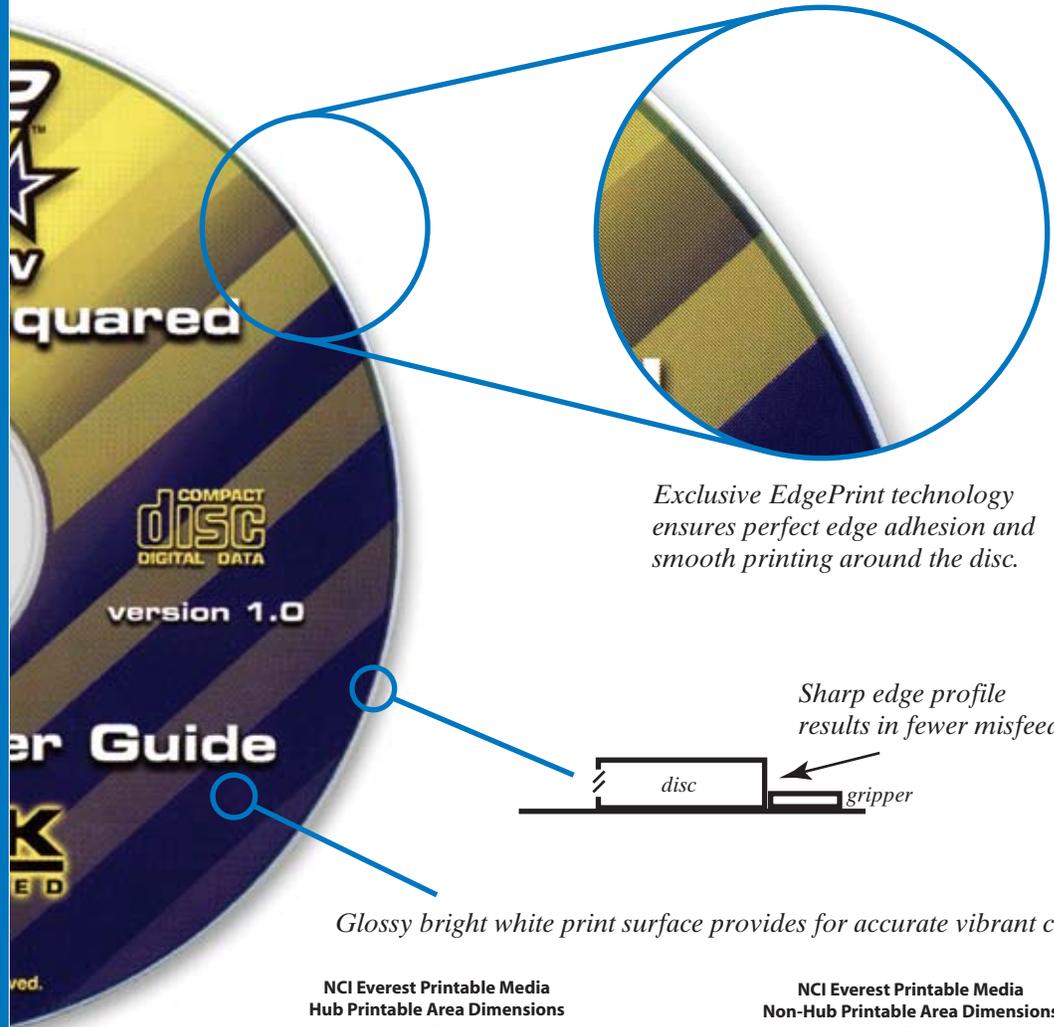

Stop looking ... start printing.

NCI UltraPrint Everest printable media is the first low cost media specifically designed for optimal edge to edge print performance using Rimage Everest I, II and III printers. This breakthrough design is based on a unique dual coating process which provides both a smooth, glossy bright white top coat as well as a thermal protective base coat which is guaranteed to hold the outside edge of any printed image.

This coating system is applied at our Chardon, OH facility to exacting specifications and works so well, we guaranteed it to outperform any disc currently on the market for overall print quality. If you are like us, you chose the Everest Printer for its superior print quality - don't let your media ruin your results. Get the most from your printer with media from NCI.
